

The RSC-BMCS Lectureship

The Biological and Medicinal Chemistry Sector (BMCS) of the RSC invites applications/nominations for the BMCS Lectureship

The BMCS Lectureship, first awarded in 2014, aims both to showcase current excellence in medicinal chemistry and to inspire the next generation of medicinal chemists.

We live in a time of continuing change in medicinal chemistry, which has affected both the process of drug discovery and the business models by which it is funded. Yet the great benefits of new medicines to society are clear to everyone, and the expectations for future advances, as we seek to treat currently untreatable conditions, are also great.

The previous response has been excellent: we now wish to appoint the next BMCS Lecturer(s) for 2026-2027. The person(s) appointed will have made a significant advance in the subject through developing new products or methods; there is no age restriction. They will be expected to deliver up to six lectures at UK universities in the academic year 2026-27. Visits to industrial concerns and colleges are also welcomed according to the lecturers' connections.

We encourage diversity among the nominees, while maintaining scientific excellence. Nominations from Heads of Departments are also welcome. Please see <https://www.rscbmcs.org/awards/lectureship/>, where the previous holders of the Lectureship are listed. Any queries may be addressed to: Dr. Andrew Stachulski: stachuls@liv.ac.uk

Applications should be very brief, explaining in a few sentences why the nominee should be considered and describing their contributions to medicinal chemistry. Nominations should be sent no later than 30th September 2026 to: Hg3 Conferences, UK, e-mail events@hg3.co.uk. All applications will be acknowledged.
